Gel Suction Suspension Sleeve - No Fabric

SLEEVES

The EASYSLEEVE Super Stretch from ALPS may be the most dramatic improvement in suspension since the pin. The unparalleled combination of softness, strength, and elasticity of the ALPS EasyGel used in the EASYSLEEVE Super Stretch provides comfort and durability never thought possible. Being the ONLY Gel suction suspension sleeve without the restriction of a fabric cover, the EASYSLEEVE Super Stretch allows complete freedom of movement and at the same time achieves superior secure suspension by sealing with the skin without restricting circulation. This innovative product provides, for the first time, a very attractive alternative to using pin suspension. Many are now choosing to add the EASYSLEEVE Super Stretch to existing pin systems to provide additional security without any loss of comfort. By using a separate fabric cover the EasyGel is able to move with the user thereby reducing the forces against the patella and allowing the bulk of the sleeve to be displaced away from the popliteal area. The award-winning EASYSLEEVE Super Stretch is able to do all this without having to sacrifice durability.

## Here are a few of the built-in features that you will find in the EASYSLEEVE Super Stretch from ALPS:

- Complete freedom of movement
- No pressure against the patella throughout knee flexion
- Takes advantage of vacuum suspension to provide security
- Minimizes compression and irritation proximally
- Separate Fabric cover keeps dirt and clothes away from Gel
- Longer lengths to accommodate more users
- Durable
- Available in 6mm thickness
